stack overflow
FOR TEAMS

Your team already knows and loves Stack Overflow

When developers run into problems they can't solve on their own, they turn to Stack Overflow. In fact, more than 50 million developers visit our question-and-answer site each month.

Stack Overflow for Teams builds on our proven Q&A approach by providing a private, secure home for your organization's own questions and answers. This gives your technical staff instant access to their peers' expert knowledge of your own proprietary systems and processes—in the same format they already use to get general coding help.

Put a stop to these time stealers

When your technical team is inefficient, you lose time. Time you could use to get products to market faster. Time you could use to tackle important priorities. Time you can never get back.
- ⊘ **Developers can't find answers** because they don't know who to ask. Or worse, the only person with the answer is on vacation. We remove these bottlenecks by making answers always available.

- ⊘ **Developers ask the same questions** over and over again, the inevitable outcome when your team uses email, messaging apps and face-to-face communication to get answers.

- ⊘ **Developers sift through wikis** and pages upon pages of documentation. Stack Overflow for Teams offers bite-sized answers and code snippets so they can copy, paste and go back to work.

- ⊘ **Developers struggle to get up to speed** when they join your company. Stack Overflow for Teams speeds onboarding, so new devs can become full-fledged contributors sooner.

- ⊘ **Developers with specialized knowledge get distracted** by the daily barrage of repetitive questions. Give them back their brain power by letting them create one reusable, searchable artifact.

What you get with Stack Overflow for Teams

Unlimited private questions and answers in a searchable archive

Got lots of questions? We've got a place to put 'em. Every Q&A post is indexed and easy to search, and you can export your data at any time.

Bite-sized answers to your team's questions

Your technical team gets the quick answers they need through our flagship Q&A engine, built to mimic the way people naturally think about, share, and find information.

Secure data

Rest easy knowing that your data is secured in a dedicated network and logically separated into its own SQL schema.

Integration with your favorite tools

Love Slack? So do we. Get notifications straight to your Slack workspace or build your own integration with our API.

Way to identify your experts

Every time your engineers contribute a great question or answer, they earn badges and points. Use these to highlight top contributors and to incentivize your team to help others.

I cannot overstate how immediately and dramatically it changed how knowledge is shared and memorialized among our engineering team. This stays as up-to-date, relevant, and useful as the regular Stack Overflow, without any extra effort.

J.J. FLIEGELMAN
CTO, WAYUP
