

Stack Overflow for Teams

[Stack Overflow for Teams](#) helps development teams of any size share and retain technical knowledge, solve problems, and ship projects faster. Although developers often share the same challenges and sticking points, we provide a range of plans to meet the needs of teams based on their size.

BASIC

Our Basic tier is great for developer teams of 2-100. Access a dedicated, private area on stackoverflow.com, where members can ask and answer questions. It's quick and easy to create a new team — just sign up, seed a few questions, invite team members, and go!

Teams can access both private knowledge and public content from stackoverflow.com in one place, helping you get the information you need and get back to developing great products.

BUSINESS

Stack Overflow Business is a private, secure home for your organization's questions and answers. No more digging through stale documentation and lost emails. Business is ideal for development teams of 50 - 1,000.

In addition to our base plan features, Stack Overflow Business enables easy administration with single sign-on (SSO), invoicing, and data security. Our team provides priority support, and you can continue to keep a pulse on the impact of the tool for your organization with our dashboard of usage and engagement metrics.

ENTERPRISE

For organizations with at least 500 developers, we offer Stack Overflow Enterprise. Stack Overflow Enterprise gives your company a dedicated and private instance of Stack Overflow (the same codebase that runs stackoverflow.com), that can be run in the cloud or on premise. You have complete control over the theme, moderation, and end-user experience. Accessing the tool is made easy with single sign-on support, and a full read/write API.

Tap into our Enterprise Community Development team with a dedicated Customer Success member to help you understand and build your internal community from the ground up.
